Вариант 62

$$f(x) = \begin{cases} 0, & x \in [0, 1) \\ 2-x, & x \in [1, 2) \end{cases}$$

$x \in [-1, 1]$

$$f(x) \sim \frac{a_0}{2} + \sum_{k=1}^{\infty} a_k \cos \frac{\pi k x}{L} + b_k \sin \frac{\pi k x}{L}$$

$$\text{где } a_k = \frac{1}{L} \int_{-L}^L f(x) \cos \frac{\pi k x}{L} dx$$

$$b_k = \frac{1}{L} \int_{-L}^L f(x) \sin \frac{\pi k x}{L} dx$$

коэф. Фурье: $C_k = \frac{\langle f, e_k \rangle}{\|e_k\|^2}$

т.к. функция задана на $[0, 2]$
 надо сделать замену, т.к. удобнее
 строить на сим. отрезке.

$$t = x - 1 \Rightarrow x = t + 1 \quad x \in [0, 2] \Rightarrow t \in [-1, 1]$$

$$\int g(t) = f(t+1)$$

$$\Rightarrow g(t) = \begin{cases} 0 & t \in [-1, 0) \\ 1-t & t \in [0, 1] \end{cases}$$

т.к. $L=1$, то $g(t) \sim \frac{a_0}{2} + \sum_{k=1}^{\infty} (a_k \cos \pi k t + b_k \sin \pi k t)$

т.к. $g(t)$ на $[-1, 0] = 0$, то нам считаем
 на $[0, 1]$.

$$a_0 = \int_{-1}^1 g(t) dt = \int_0^1 (1-t) dt = t - \frac{t^2}{2} \Big|_0^1 = \frac{1}{2}$$

$$a_0 = \frac{1}{2}$$

$$a_k = \int_{-1}^1 g(t) \cos \pi k t dt = \int_0^1 (1-t) \cos \pi k t dt$$

3. 17 k=2

$$a_k = \int_0^1 (1-t) \cos 2t dt = \int_0^1 \cos 2t dt - \int_0^1 t \cos 2t dt$$

① ②

$$① \int_0^1 \cos x t dt = \frac{\sin x}{x}$$

$$② \int_0^1 t \cos x t dt = \left(\frac{t \sin x t}{x} + \frac{\cos x t}{x^2} \right) \Big|_0^1$$

$$= \frac{\sin x}{x} + \frac{\cos x}{x^2} - \frac{1}{x^2} = \frac{\sin x}{x} + \frac{\cos x - 1}{x^2}$$

$$\Rightarrow a_k = \frac{\sin x}{x} - \left(\frac{\sin x}{x} + \frac{\cos x - 1}{x^2} \right) = \frac{1 - \cos x}{x^2}$$

$$a_k = \frac{1 - \cos \pi k}{\pi^2 k^2} \Rightarrow a_k = \frac{1 - (-1)^k}{\pi^2 k^2}$$

$$b_k = \int_{-1}^1 g(t) \sin \pi k t dt = \int_0^1 (1-t) \sin \pi k t dt$$

$$x = \pi k$$

$$b_k = \int_0^1 (1-t) \sin x t dt =$$

$$= \int_0^1 \sin x t dt - \int_0^1 t \sin x t dt$$

$$① \int_0^1 \sin x t dt = \frac{1 - \cos x}{x}$$

$$\textcircled{2} \int_0^1 t \sin \lambda t dt = \left(-\frac{t \cos \lambda t}{\lambda} + \frac{\sin \lambda t}{\lambda^2} \right) \Big|_0^1$$

$$= -\frac{\cos \lambda}{\lambda} + \frac{\sin \lambda}{\lambda^2}$$

$$\Rightarrow b_k = \frac{1 - \cos \lambda}{\lambda} - \left(-\frac{\cos \lambda}{\lambda} + \frac{\sin \lambda}{\lambda^2} \right) =$$

$$= \frac{1}{\lambda} - \frac{\sin \lambda}{\lambda^2}, \text{ т.к. } \lambda = \pi k \Rightarrow \sin \pi k = 0$$

$$\Rightarrow b_k = \frac{1}{\pi k}$$
